

Electronics Software Engineer

Green innovation meets performance

Our Project

Formula Electric Belgium is a student-based race team that pushes green innovation to performance. We design and build our own electric race car each year to participate in international Formula Student competitions. We are looking for pioneers to challenge the status quo and bring our top-notch electric race car to the next level. As a postgraduate student, you will research, design, and test your systems together with a group of highly motivated students. You will innovate together with your team members and numerous companies to develop our next generation formula student race car.

Function

As **Software Engineer**, you will play a pivot-al role in the development and optimization of the car's low-voltage systems, focusing on sensors and the Electronic Control Unit (ECU). Your expertise will drive the integration and functionality of the vehicle's electronic systems, effectively serving as the **"brain" of the car**.

Key Responsibilities:

ECU Optimization: Refining ECU code to efficiently process sensor data and optimize algorithms for vehicle performance.

Sensor Integration: Overseeing the software integration of sensors, ensuring seam-less data acquisition and operation.

System Architecture: Collaborating on race car algorithm architecture and working with the CAN protocol to ensure reliable vehicle communication.

Profile

- Bachelor/Master Engineering Science, Engineering Technology or equivalent
- Broad technical insight
- Experience in Object-Oriented Programming and C++
- Team player
- Effective communication

Returns

- A unique engineering experience
- Developing your hard- and soft-skills in a company-like environment
- Work with the newest technologies and innovative companies
- Work in a team with a network of well over 120 partners
- A summer season packed with competitions all over Europe
- An experience of a life-time!

Up for the challenge?
